C:\Users\anufo\OneDrive - Sri Lanka Institute of Information Technology\Desktop\git>git config --user.name IT24103479
error: unknown option `user.name'
usage: git config [<options>]

Config file location
    --[no-]global           use global config file
    --[no-]system           use system config file
    --[no-]local            use repository config file
    --[no-]worktree         use per-worktree config file
    -f, --[no-]file <file>
                            use given config file
    --[no-]blob <blob-id>   read config from given blob object

Action
    --[no-]get              get value: name [value-pattern]
    --[no-]get-all          get all values: key [value-pattern]
    --[no-]get-regexp       get values for regexp: name-regex [value-pattern]
    --[no-]get-urlmatch     get value specific for the URL: section[.var] URL
    --[no-]replace-all      replace all matching variables: name value [value-pattern]
    --[no-]add              add a new variable: name value
    --[no-]unset            remove a variable: name [value-pattern]
    --[no-]unset-all        remove all matches: name [value-pattern]
    --[no-]rename-section   rename section: old-name new-name
    --[no-]remove-section   remove a section: name
    -l, --[no-]list         list all
    --[no-]fixed-value      use string equality when comparing values to 'value-pattern'
    -e, --[no-]edit         open an editor
    --[no-]get-color        find the color configured: slot [default]
    --[no-]get-colorbool    find the color setting: slot [stdout-is-tty]

Type
    -t, --[no-]type <type>
                            value is given this type
    --bool                  value is "true" or "false"
    --int                   value is decimal number
    --bool-or-int           value is --bool or --int
    --bool-or-str           value is --bool or string
    --path                  value is a path (file or directory name)
```

```
Other
    -z, --[no-]null         terminate values with NUL byte
    --[no-]name-only        show variable names only
    --[no-]includes         respect include directives on lookup
    --[no-]show-origin      show origin of config (file, standard input, blob, command line)
    --[no-]show-scope       show scope of config (worktree, local, global, system, command)
    --[no-]default <value>
                            with --get, use default value when missing entry
    --[no-]comment <value>
                            human-readable comment string (# will be prepended as needed)
